PocketSmart AI

Epic 2: Core Functionalities Development

Objective: Develop authentication, database management, budget planning and recommendation history.

Files and Folders

Project structure

```
PocketSmart-AI/
■■■ app/
    ■■■ __init__.py
    ■■■ config.py
    ■■■ database.py
    ■■■ models.py
    ■■■ schemas.py
    ■■■ auth.py
    ■■■ dependencies.py
    ■■■ routers/
    ■   ■■■ __init__.py
    ■   ■■■ auth.py
    ■   ■■■ history.py
    ■   ■■■ planners.py
    ■■■ services/
        ■■■ __init__.py
        ■■■ gemini_service.py
        ■■■ recommendation_service.py
```

Core Files

- app/config.py — Application and environment configuration.
- app/database.py — SQLite and SQLAlchemy connection/session management.
- app/models.py — User and recommendation history models.
- app/schemas.py — Request and response validation schemas.
- app/auth.py — Password hashing, verification, JWT creation and validation.
- app/dependencies.py — Authentication and current-user dependencies.

Authentication

- app/routers/auth.py
- User registration
- User login
- User logout
- JWT authentication
- Authentication cookies
- Session information
- Recommendation count

Planning Functionalities

- app/routers/planners.py
- Home Interior Planner
- Party Planner
- Jewelry Planner

- Budget validation
- Recommendation generation
- Image upload
- Recommendation history storage

History

- app/routers/history.py
- Saving recommendations
- Retrieving recommendation history
- User-specific history
- Latest recommendation ordering

Epic 2 Deliverable

Complete core functionality for authentication, database, planning, budgeting, recommendations, and history.
